

Do you remember the terrible (more deadly than covid) pandemic of 2014/2015?

How about the terrible (also more deadly than covid) pandemic of 2016/2017?

You don't remember that? Well, neither do we.

The data presented in the following chart has been pulled directly from the **Stats Canada** website, the source reference information can be located at the bottom of this page. This data accounts for all deaths in Canada, from all causes. Footnotes have been included on the back of this page.

Footnote 1

Period from July 1 to June 30.

Footnote 2

The number of deaths is final up to 2017/2018, updated for 2018/2019 and preliminary for 2019/2020.

Footnote 3

Data for persons aged 90 to 100 years and over will be available from 2001/2002.

Footnote 4

Preliminary and updated estimates of deaths were produced by the Centre for Demography, Statistics Canada (See Definitions, data sources and methods record number 3601). Vital statistics preliminary data may be used in updated estimates of deaths. Final data are from Vital Statistics – Birth and Death Databases, Statistics Canada (See Definitions, data sources and methods record number 3233). However, before 2011, the final estimates included in this table may differ from vital statistics already released by Statistics Canada, due to the imputation of certain unknown values. In addition, for estimates of deaths, the age represents age at the beginning of the period (July 1st) and not the age at the time of occurrence, as with the Vital Statistics data. In the absence of Vital statistics data for Yukon, the 2016 age and sex distribution are used to derive the deaths by age and sex.

Footnote 5

The population growth, which is used to calculate population estimates, is comprised of the natural growth (Tables 17100006 and 17100016), international migration (Table 17100014) and interprovincial migration (Table 17100015).

Footnote 6

Age at July 1.

Footnote 7

Age -1 represents persons born after July 1 and not included in age group 0 to 4 years.
